Contents

Part I The classical theory of Soergel bimodules

1 How to think about Coxeter groups 3
1.1 Coxeter systems and examples 3
1.2 Coxeter group fundamentals 13

2 Reflection groups and Coxeter groups 23
2.1 Reflections and affine reflections 23
2.2 Affine reflection groups 24
2.3 Affine reflection groups are Coxeter groups 25
2.4 Expressions and strolls 28
2.5 Classification of affine reflection groups 32
2.6 The Coxeter complex 32

3 The Hecke algebra and Kazhdan–Lusztig polynomials 35
3.1 The Hecke algebra 35
3.2 The Kazhdan–Lusztig basis 39
3.3 Existence of the Kazhdan–Lusztig basis 43

4 Soergel bimodules 53
4.1 Gradings 53
4.2 Polynomials 55
4.3 Demazure operators 58
4.4 Bimodules and tensor products 60
4.5 Bott–Samelson bimodules 61
4.6 Soergel bimodules 62
4.7 Examples of Soergel bimodules 63
4.8 A first glimpse of categorification 67

5 The “classical” theory of Soergel bimodules 69
5.1 Twisted actions 69
5.2 Standard bimodules 70

5.3 Soergel bimodules and standard filtrations 71
5.4 Localization 75
5.5 Soergel's Categorification Theorem 77
5.6 A technical wrinkle 80
5.7 Realizations of a Coxeter system 81
5.8 More technicalities 87

6 Sheaves on moment graphs 89
6.1 Roots in the geometric representation 89
6.2 Bruhat graphs 90
6.3 Moment graphs 94
6.4 Sheaves on moment graphs 95
6.5 The Braden–MacPherson algorithm 97
6.6 Stalks and standard bimodules 102
6.7 A functor to sheaves on moment graphs 104
6.8 Soergel's conjecture and the Braden–MacPherson algorithm 105

Part II Diagrammatic Hecke category

7 How to draw monoidal categories 109
7.1 Linear diagrams for categories 109
7.2 Planar diagrams for 2-categories 110
7.3 Drawing monoidal categories 113
7.4 The Temperley–Lieb category 115
7.5 More about isotopy 118

8 Frobenius extensions and the one-color calculus 121
8.1 Frobenius structures 121
8.2 A tale of one color 131

9 The Dihedral Cathedral 139
9.1 A Tale of Two Colors 139
9.2 The Temperley–Lieb 2-category 142
9.3 Jones–Wenzl projectors 145
9.4 Two-color relations 149

10 Generators and relations for Bott–Samelson bimodules and the double leaves basis 155
10.1 Why present $\mathbb{BS}$Bim? 155
10.2 Generators and relations 159
10.3 Rex moves and the 3-color relations 174
10.4 Light leaves and double leaves 177

11 The Soergel categorification theorem 187
11.1 Introduction 187
11.2 Prelude: from $\mathcal{H}_{\mathrm{BS}}$ to $\mathcal{H}$ 190
11.3 Grothendieck groups of object-adapted cellular categories 198
11.4 Appendix: Krull–Schmidt categories 208
11.5 Appendix: Composition forms, cellular forms, and local intersection forms 213

12 How to draw Soergel bimodules 223
12.1 The 01-basis 223
12.2 Commutative ring structure on a Bott–Samelson bimodule 225
12.3 Trace and the global intersection form 227
12.4 Bott–Samelson bimodules and the light leaves basis 229
12.5 Light leaves basis and the standard filtration on Bott–Samelson bimodules 232
12.6 Appendix: A crucial positivity result 234

Part III Historical context: category $\mathcal{O}$ and the Kazhdan–Lusztig conjectures

13 Category $\mathcal{O}$ and the Kazhdan–Lusztig conjectures 241
13.1 Introduction 241
13.2 The Verma problem 242
13.3 The Kazhdan–Lusztig conjectures 245
13.4 Two proofs of the Kazhdan–Lusztig conjecture 248

14 Lightning introduction to category $\mathcal{O}$ 251
14.1 Lie algebra basics 251
14.2 Category $\mathcal{O}$ 256
14.3 Duality in $\mathcal{O}$ 258
14.4 Blocks of category $\mathcal{O}$ 261
14.5 Example: $\mathfrak{g} = \mathfrak{sl}_3(\mathbb{C})$ 266

15 Soergel's $\mathbb{V}$ functor and the Kazhdan–Lusztig conjecture 271
15.1 Brief reminder on category $\mathcal{O}$ 271
15.2 Translation functors 273
15.3 Soergel modules 282
15.4 Soergel's $\mathbb{V}$ functor 284
15.5 Soergel's approach to the Kazhdan–Lusztig conjecture 288

16 Lightning introduction to perverse sheaves 291
16.1 Motivation 291
16.2 Stratified spaces and examples 292

Part IV The Hodge theory of Soergel bimodules

17 Hodge theory and Lefschetz linear algebra 309
17.1 Introduction 309
17.2 Hard Lefschetz 311
17.3 Hodge–Riemann bilinear relations 314
17.4 Lefschetz lemmas 316

18 The Hodge theory of Soergel bimodules 321
18.1 Introduction 321
18.2 Overview and preliminaries 322
18.3 Outline of the proof 330
18.4 The weak Lefschetz problem 334
18.5 From $\zeta = 0$ to $\zeta \gg 0$ 335
18.6 From local to global intersection forms 337
18.7 Hodge theory of matroids 338

19 Rouquier complexes and homological algebra 341
19.1 Motivation 341
19.2 Some homological algebra 344
19.3 Rouquier complexes and categorification of the braid group 352
19.4 Cohomology of Rouquier complexes 358
19.5 Perversity 359
19.6 The diagonal miracle 362
19.7 Appendix: More homological algebra 364

20 Proof of the hard Lefschetz theorem 371
20.1 Introduction 371
20.2 Preliminaries 372
20.3 The Hodge–Riemann relations for the Rouquier complex 373
20.4 Positivity of breaking 376
20.5 Sketch of the proof of hard Lefschetz 380
20.6 Appendix: Some historical context and geometric intuition for the proof of Soergel's conjecture 382

Part V Special topics

21 Connections to link invariants 391
21.1 Temperley–Lieb algebra 391
21.2 Schur–Weyl duality 394
21.3 Trace and link invariants 396
21.4 Quantum groups and link invariants 399
21.5 Ocneanu trace and HOMFLYPT polynomial 401
21.6 Categorification of braids and of the HOMFLYPT invariant 404

22 Cells and representations of the Hecke algebra in type *A* 411
22.1 Cells 411
22.2 Cells in type A 417
22.3 Representations of the Hecke algebra in type A 423

23 Categorical diagonalization 429
23.1 Classical linear algebra 429
23.2 Categorified linear algebra 432
23.3 A toy example 438
23.4 Diagonalizing the full twist 442

24 Singular Soergel bimodules and their diagrammatics 449
24.1 The classical theory of singular Soergel bimodules 449
24.2 One-color singular diagrammatics 454
24.3 Singular Soergel diagrammatics in general 462

25 Koszul duality I 479
25.1 Introduction 479
25.2 dg-algebras 481
25.3 dg-Morita theory 483
25.4 Koszul duality for polynomial rings 485
25.5 Review of the Kazhdan–Lusztig conjecture 488
25.6 Evidence of Koszul duality in category $\mathcal{O}$ 490

26 Koszul duality II 493
26.1 Introduction 493
26.2 Graded category $\mathcal{O}_0$ 494
26.3 Homological properties of Soergel $\mathcal{O}_0$ 502
26.4 Koszul duality 504
26.5 Some odds and ends 510

27 The *p*-canonical basis 511
27.1 Introduction 511
27.2 Definition of the p-canonical basis 512
27.3 Computing the p-canonical basis 515
27.4 Geometric incarnation of the Hecke category 520
27.5 Modular representation theory of reductive groups 525
